

February 11, 2016

Technology Policy International, LLC (TPI) announces its establishment as a limited liability company to provide consulting services in the field of science, technology, and innovation policy. TPI has existed for more than 20 years as an informal consultancy, but in its new form it has expanded capabilities to serve domestic and international clients in four key areas:

- Analytic studies of science, technology, and innovation policies, programs, and institutions
- Design, implementation assistance, and evaluation of research, development, and innovation policies and programs
- Strategic planning/advisory services for research institutes and universities
- Capacity building workshops and short courses related to these topics

TPI's partners are David Cheney, George Heaton, Christopher Hill, and Patrick Windham. Together they bring to TPI's clients a unique blend of experience in government, academia, industry, and non-profit organizations; knowledge of U.S. and international science and technology policy issues; and consulting experience helping science, technology, and innovation institutions around the world.

David Cheney, TPI's new managing partner, said, "Based on our experience, analytic skills, cost-effective structure, and project management skills, we can provide extraordinary value to clients that need help with their science, technology, and innovation programs and institutions."

More information on TPI's members, services, and previous studies can be found at [www.technopoli.net](http://www.technopoli.net). For more information on how TPI can help clients with their innovation policy needs, please contact David Cheney at [david.cheney@technopoli.net](mailto:david.cheney@technopoli.net).
